*Date: November 2008*

*Contact: Dennis Langley*

*For Release: IMMEDIATE!*

**Los Angeles, CA... One of the best kept secrets in the industry, Robwen (best known for their foam injection systems), has been manufacturing small, centrifugal water pumps for over 16 years. Robwen has been supplying some of the most respected small appliance builders in the country with pumps for many years.**

**Born in 1992 from a requirement for 70 GPM and 100 GPM pumps for their own slip-on product line, Robwen engineers set about the task of developing a more efficient impeller. Now, with thousands of pumps in service, Robwen is declaring the extended "field test" a success and is ready to launch a 16 year old product.**

**The Model 125 delivers in excess of 75 GPM @ 100 PSI while the Model 180 delivers 120 GPM @ 100 PSI. Available with or without the power supply, these rugged pumps will provide years of dependable service. So, the next time you are planning for a new slip-on, brush truck or quick-attack, consider Robwen not only for your foam delivery but for your water too.**

For more information, call Robwen, Inc. at 800-365-9281 or your favorite apparatus dealer.
